We Introduce Ourselves – The Company

70+ years of expertise

Our company can look back on 70 years of experience in the development of measurement technology.

Market leader

Today we are one of the world market leaders with German roots.

Production site

At our production site in Baunach, we develop and manufacture measuring devices for all types of water supply networks.

Quality – of course

We work at the highest technological level, including very high production standards.

No way is always easy. This also applies to ours. That is why we concentrate the strengths of our employees on the essentials. For us, these are water leak detection and water loss reduction.

In the event of leaks in pipeline networks, the fastest possible remedy is required to prevent a large amount of the valuable food water from being lost. The simple handling and reliability of the SebaKMT® technology are the perfect basis for this.

HL7000, HL50-BT

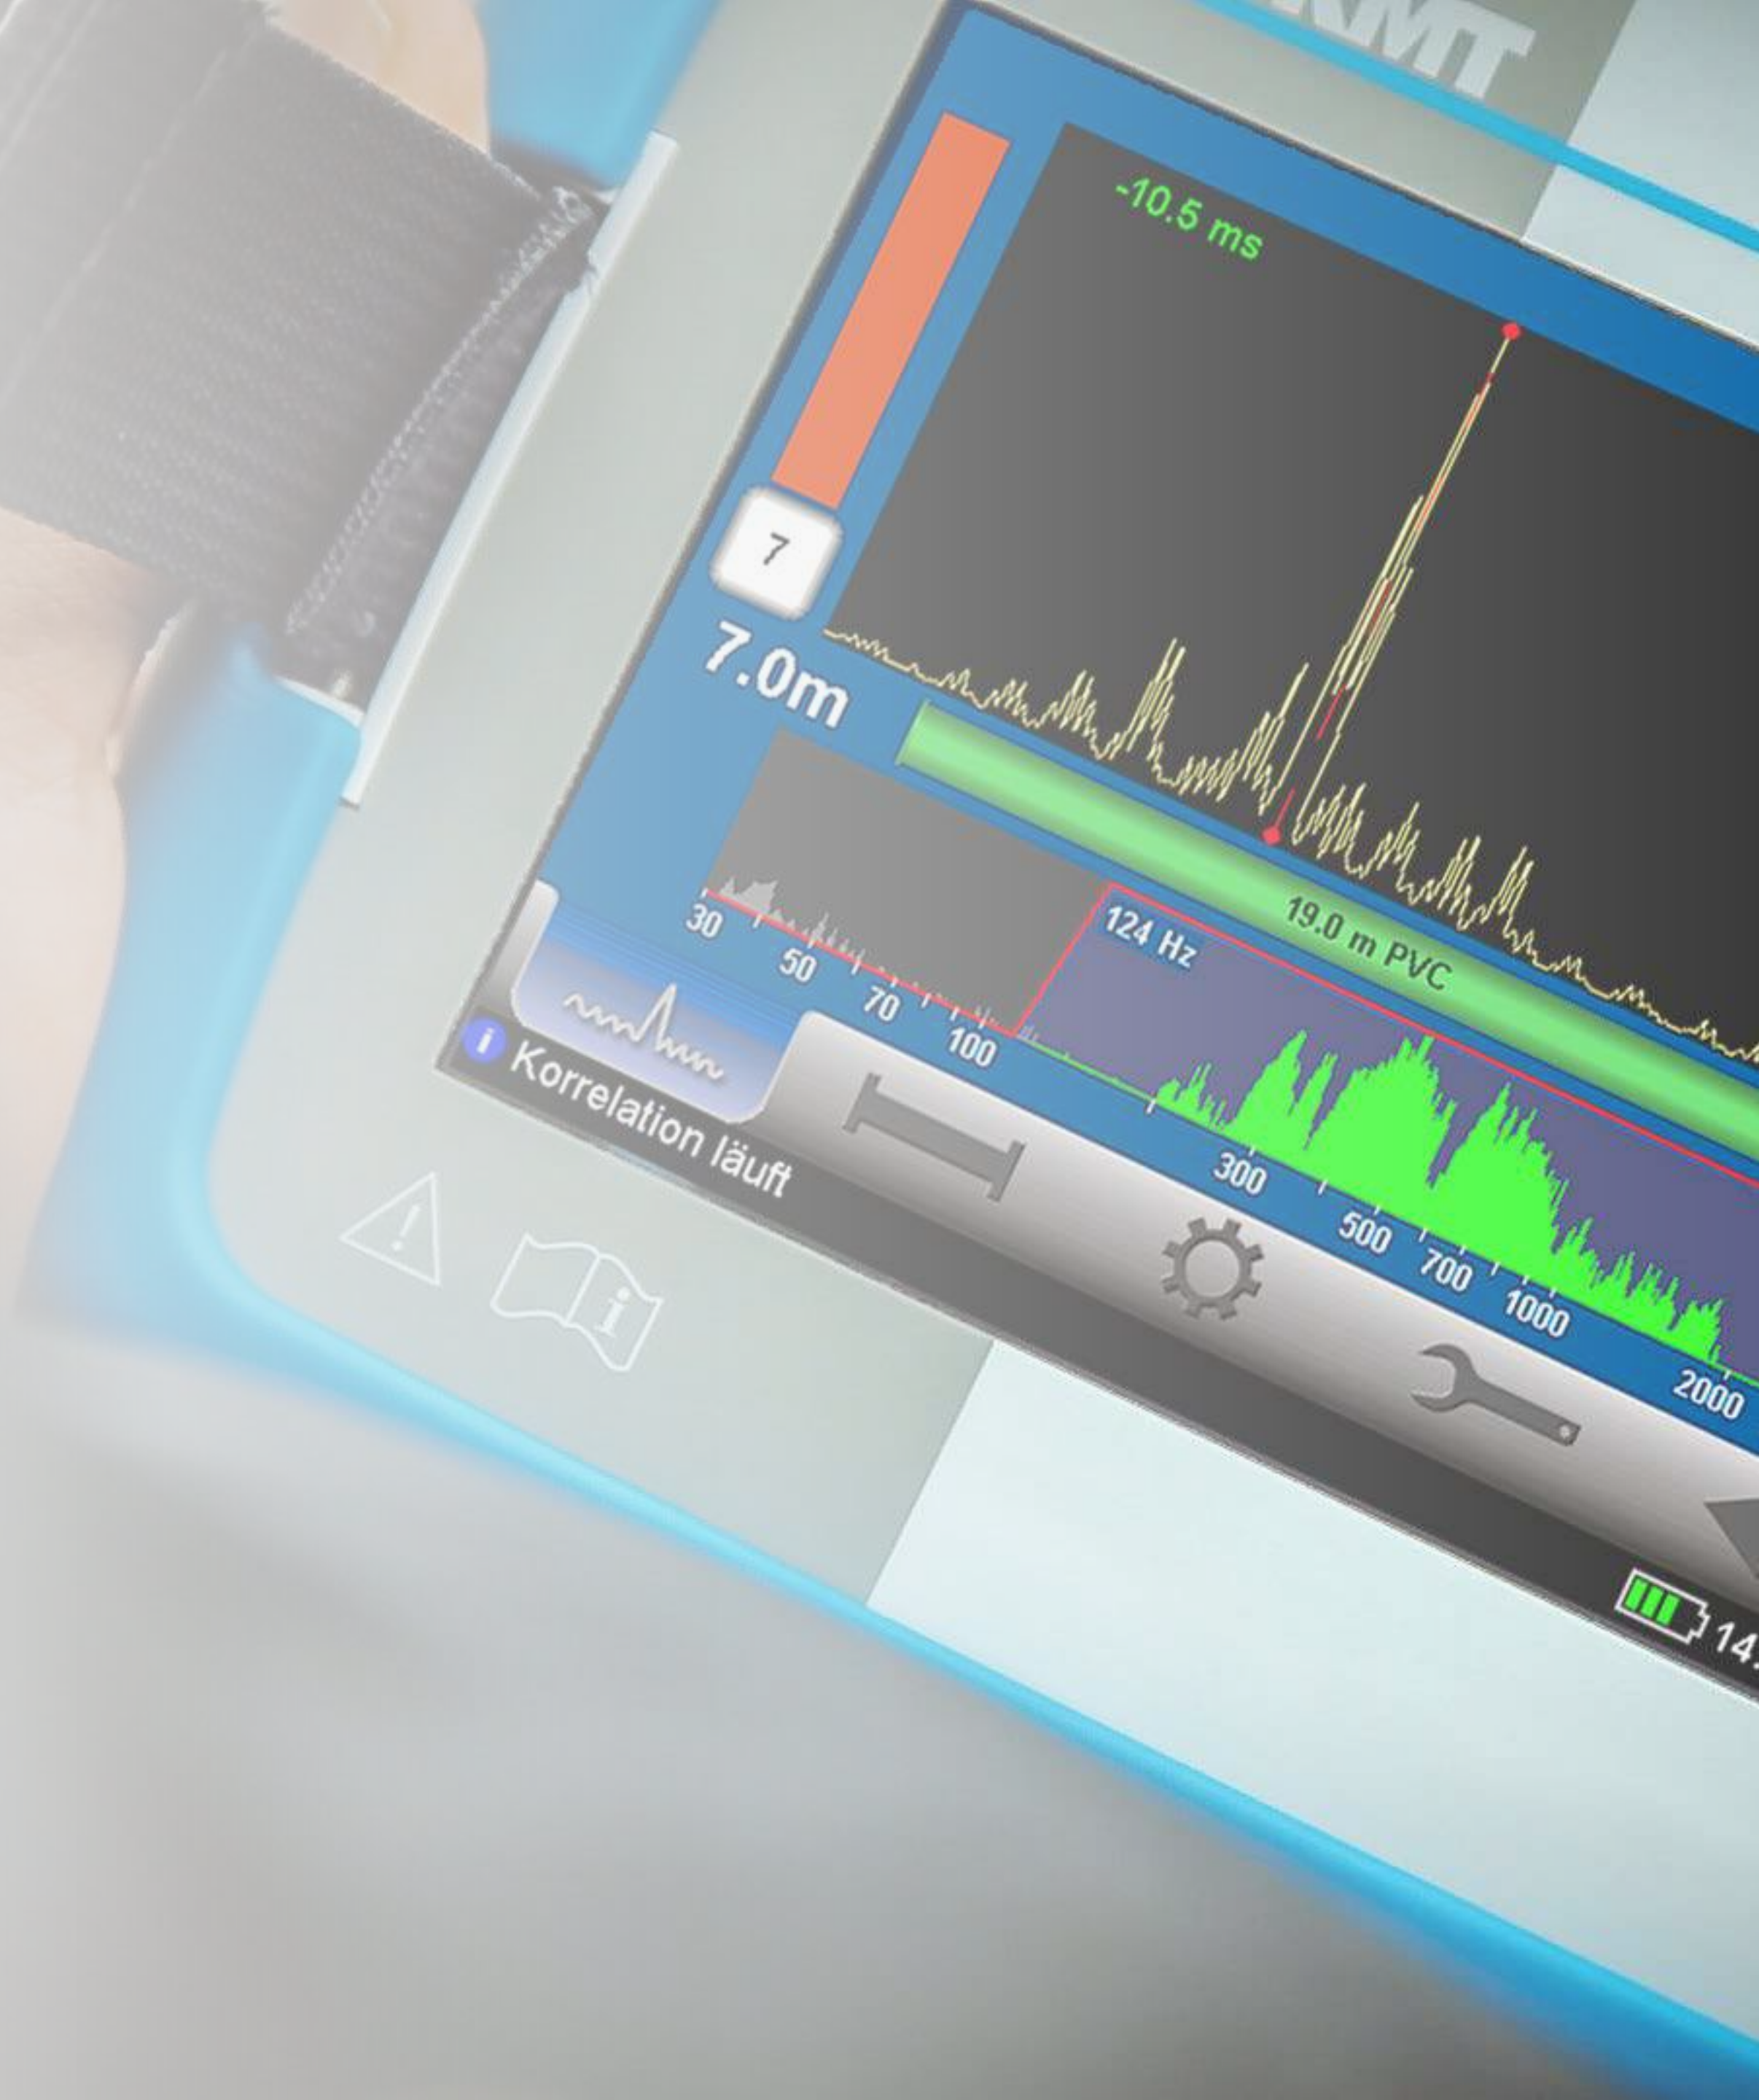

Electro-acoustic leak detection with ground microphone, sensor rod and tracer gas, Hand-held leak locator with integrated sensor and wireless headphones

Correlux C-3 Series

Hybrid correlator for online and offline measurements

SebaFlow-BAT

Permanent zone monitoring with
ultrasonic flow measurement
